Green Cow Breeder Ration is available in bulk or 25kg bags.

Green Cow Breeder Ration blends Certified Organic grains and protein meals with Biochar Activated Green Cow Feed Additive to provide your herd with all the essential mineral and vitamin requirements for optimum health and productivity.

Our Green Cow Breeder Ration offers you an affordable and environmentally friendly option while delivering superior health to your cattle.

NUTRITION

Provides all the essential minerals for cattle, considering the requirements and differences of foraging behavior, age and stage of production.

Increases production due to binding of Mycotoxins and positive gut health. Green Cow Feed Additive extends retention time of feed and improves the Feed Conversion Ratio (FCR).

SUPERIOR HEALTH

The key ingredient is a specially formulated blend of biochar for animal ingestion to improve livestock health through favourable gut micro flora and removal of pathogenic flora (e.g. Campylobacter and Heliobacterium), aiding weight gain and ultimately improve the profitability of your beef operation.

ENVIRONMENTAL BENEFITS

Reduction in nitrogen loss and greenhouse gasses, (reduced odour) due to enhanced Cation Exchange Capacity; decreased Urolytic activity; and decreased PH or aeration.

The value of manure is also improved creating a more stable fertilizer with higher nitrogen, phosphorus and potassium (NPK) values and stable carbon to add to soil values for future carbon credits.
